

Authors who submit manuscripts to the journal should carefully read these Instructions for Authors when preparing their manuscripts, because compliance with these instructions will help reduce delays in manuscript processing. A manuscript is received with the understanding that it and all revisions have been approved by all authors and that neither the manuscript nor any of its parts has been published, except as an abstract less than 250 words long, or is under concurrent consideration by any other publication. The corresponding author must provide a signed statement to this effect. A manuscript containing information published in any compiled printed (eg, journals, symposia, proceedings, newsletters, books) or electronic (eg, Web sites, CD-ROMs, DVDs) format will be rejected on the grounds of prior publication. Publication of abstracts less than 250 words long does not constitute prior publication; however, publication of longer abstracts may. At the time of manuscript submission, the corresponding author must include copies of any abstracts of the manuscript that have been published or submitted for publication or that are expected to be submitted for publication. All authors of *IJVS* will be required to sign a written statement transferring copyright to the IVSA prior to publication of any manuscript or letter. Requests to copy, reprint, or use portions of published material (including information in figures and tables) should be addressed to the editor-in-chief.

Caution: The journal editorial office keep the right of rejecting the manuscripts which are not prepared according to the journal outlines.

Manuscript submission

Manuscripts should be submitted through electronic web site. Manuscripts must be in English, with Farsi and English summaries (for the authors from other countries, the Farsi summary is not necessary), and Microsoft Word format (.doc or .docx). The manuscript (including footnotes, references, figure legends, and tables) must be double-space typed, using 12-point Arial font, 3.5 cm margins, and left justification.

Manuscripts should be arranged as follows: [Title page](#), [English and Farsi structured abstract](#), [Manuscript main file](#) (contained text, footnotes, references, figure's legend) and [tables](#). Title page, manuscript main file, figures and tables must be uploaded as separated files. Persian abstract should be uploaded as a supplementary file and written based on journal guideline (please refer to the latest published article).

The title page must include the title and the first name, middle initial, and last name of each author, along with each author's professional degree, and highest earned academic degree. Professional affiliations of the authors at the time of the study should be indicated. If an author's affiliation has changed since the study was performed, the author's new affiliation should be identified. If information in the text has been presented at a scientific meeting, this should be indicated on the title page. Acknowledgments, sources of funding, and the name of the corresponding author should also be included on the title page. Software programs that automatically create endnotes, footnotes, and references should not be used.

Manuscript Main File must be contained only the manuscript text as well as figure's legends and refernces without the Authors name and affiliation.

Each line and page of the manuscript must be numbered, beginning from the title page. All figures should be saved as separate electronic files; figures should not be embedded in the manuscript. Figure's legend must be inserted at the end of the manuscript main file. Simple figures such as line drawings, bar graphs, and line graphs prepared in Excel should be saved as Excel files (.xls). Line drawings and graphs that were not prepared in Excel should be scanned on a flatbed scanner. Files should be saved as .JPG or .GIF files.

Figures created with software programs that use proprietary graphic formats (eg, SigmaPlot, Statistix) cannot be used; most such software programs have the capability to save figures in one of the aforementioned formats. Minimum resolution for line drawings and charts is 1,000 dots per inch.

Figures that consist of images (eg, photographs, photomicrographs, and radiographs) should be scanned on a flatbed scanner at a resolution of at least 300 dots per inch. Files should be saved as .JPG or .GIF. If images were obtained with a digital camera, please submit the electronic file, rather than printing out the image and scanning it. Color figures should be submitted in CMYK, rather than RGB, format to prevent color shift during production.

The corresponding author is also responsible for submitting required supplementary materials, including a completed **Copyright Transfer Agreement** signed by all authors; a copy of the **Statement on Prior Publication, Concurrent Submission, Authorship, and Funding** (PDF) signed by the corresponding author; copies of any references listed as "in press" or "submitted"; a copy of any abstracts containing information from the manuscript that have been published or submitted for publication; and a copy of the signed permission form from the copyright holder if the manuscript contains any tables or illustrations that have been published previously. This supplementary material may be submitted electronically (eg, by scanning and uploading with the manuscript or by uploading the electronic file) or by fax. **Manuscripts will not be considered for publication until both the Copyright Transfer Agreement and Statement on Prior Publication have been received.**

Authorship

Individuals should be listed as authors only if they 1) made a substantial contribution to the conception and design of the study, the acquisition of the data used in the study, or the analysis and interpretation of that data; 2) were involved in drafting or revising the manuscript critically for important intellectual content; and 3) will have an opportunity to approve subsequent revisions of the manuscript, including the version to be published. All three conditions must be met. Each individual listed as an author must have participated sufficiently to take public responsibility for the work. Acquisition of funding, collection of data, or general supervision of the research team does not, alone, justify authorship. For multi-institutional studies, the individual who headed the study should be listed as an author, along with individuals who provided assistance with pathologic studies (eg, review of gross and histologic specimens) and statistical analyses and any other individual who had a substantial impact on the study design or made a unique contribution to the study. Individuals who submitted case material should be listed as authors only if they contributed at least 10% of the cases included in the study; individuals who contributed less than 10% of the cases should be listed in the acknowledgments. Requests to list a working group or study group in the byline will be handled on a case-by-case basis.

Acknowledgments

Acknowledgments can be used to identify important specific contributions from individuals who do not qualify for authorship. In particular, individuals who have contributed intellectually to the study or report but whose contributions do not justify authorship may be named and their function or contribution described. In general, this includes individuals

who provided technical assistance (eg, individuals who performed special tests or research) and individuals who provided assistance with statistical analyses. Acknowledgments should not include individuals whose only contribution to the study or report involved the routine performance of their normal job duties and who did not offer any unusual intellectual contribution or technical expertise. The acknowledgments should not be used simply as a method of expressing gratitude to individuals who had a minor role in the study. Acknowledgments of nonspecific groups (eg, the intensive care unit technicians) and unidentifiable groups (eg, the anonymous contributors) are not allowed. Individuals named in the acknowledgments must have given their permission to the authors to be listed, because readers may infer their endorsement of the data and conclusions.

Funding

Authors are expected to acknowledge all sources of funding or financial support and to disclose to the editor any financial interests (including ownership, employment, consultancy arrangements, and service as an officer or board member) they have with companies that manufacture products that are the subject of their research or with companies that manufacture competing products.

Humane animal care and use

All research studies involving animals must have been performed with great respect to the animal welfare. Any unnecessary manipulation or stress should be strictly avoided. A manuscript containing information that suggests that animals were subjected to adverse, stressful, or harsh conditions or treatments will not be considered for publication unless the authors demonstrate convincingly that the knowledge gained was of sufficient value to justify these conditions or treatments. If animals were euthanatized, the method of euthanasia must be indicated.

Style

For questions of style, refer to the latest edition of the *Iranian Journal of Veterinary Surgery*. For anatomic terms, use anglicized versions of official terms listed in the *Nomina Anatomica Veterinaria*. Refer to the latest editions of the *American Drug Index* and *USP Dictionary of USAN and International Drug Names* for proper spelling of chemical and drug names and to the latest edition of *Dorland's Illustrated Medical Dictionary* for proper spelling and use of medical terms. Refer to *Bergey's Manual of Determinative Microbiology* for spelling and correct taxonomic classifications of microorganisms.

Use of abbreviations should be kept to a minimum. Except for standard abbreviations and units of measure, all abbreviations used 3 or more times in the text, figures, and tables of a manuscript should be listed at the beginning of the manuscript, along with their definitions. These abbreviations should then be used without expansion. Abbreviations that appear only in the figures or tables should be defined in the table or figure legend. Abbreviations should not be used to begin a sentence. Except for the abbreviations ELISA, ACTH, EDTA, DNA, and RNA, abbreviations should not be used in titles. In addition, abbreviations in the structured abstract must be expanded at first mention, with the abbreviation given in Parentheses after first mention of the expanded term. Products, equipment, and drugs should be identified by chemical or generic names or descriptions. A trade name may be

included in a lettered footnote if that specific product, equipment, or drug was essential for the outcome. Body weights and temperatures must be reported in metric units. Dosages must be given on a mg/kg of body weight basis. All dosages must include route of administration and interval (eg, 10 mg/kg, IV, q 12 h).

Categories of manuscripts

Authors may submit manuscripts for publication in the *original research* (including original studies, retrospective studies, and descriptive studies), *review article*, *Short communication and clinical report* sections of the journal.

A manuscript based on original research in which animals had a naturally developing or experimentally induced disease or condition will be considered for publication as an **Original Study**. A manuscript based on evaluation of case records accumulated during a specific period will be considered as a **Retrospective Study**. A manuscript in which a new technique, treatment, or diagnostic method is described will be considered as a **Descriptive Study**. A manuscript dealing with any number of clinical cases will be considered as a **Clinical Report**. A **Review article** is usually written by scholars and experts in the field who have published at least five research papers on the subject in the native and/or international journals. In review articles, the results of published researches are closely evaluated, the strong and weak points are stated, and suggestions for further improvement may be made. Short Communication are short, peer-reviewed articles focusing on a high-quality, hypothesis-driven, self-contained piece of original research and/or the proposal of a new theory or concept based on existing research.

Manuscript preparation

With the exception of review articles, all manuscripts submitted to the Original Research section must include a **Structured Abstract** of 150 to 250 words. For Original Studies, Retrospective Studies, Descriptive Studies and Short communication the structure abstract must be included the following headings: **Objective, Design, Animals** (or Sample Population), **Procedures, Results**, and **Conclusions and Clinical Relevance**. For Clinical Reports, the structured abstract must be included the following headings: **Case Description, Clinical Findings, Treatment and Outcome**, and **Clinical Relevance**. The text for an **Original Study** is organized under the following headings: Introduction, Materials and Methods, Results, and Discussion. The **Introductions** should supply sufficient pertinent background information to allow readers to understand and interpret results. It must include the rationale for the study, the investigators' hypothesis, and a clear statement of the purpose of the study. The **Materials and Methods** section should describe the experimental design in sufficient detail to allow others to reproduce the study. A subsection detailing statistical methods used to summarize data and test hypotheses and the level of significance used for hypothesis testing should be provided. When citing software products, use a footnote to cite software (eg, PROC GLM, SAS Institute, Cary, NC) and a reference to cite a *User's Guide* (eg, *SAS user's guide: statistics, version 5 edition*. Cary, NC: SAS Institute Inc, 1985; page number). The **Results** section should provide data that are clearly and simply stated without discussion or conclusions. Tables and figures should be cited parenthetically.

Authors of manuscripts reporting gene sequences should submit those sequences to an appropriate data bank. The Discussion section should focus on findings in the manuscript and should be brief, containing only discussion that is necessary for interpretation of

findings. The **Discussion** should concentrate on what is known in animals, not what is known in humans. A **Retrospective Study** is organized in a manner similar to that of an Original Study with the exception that the Materials and Methods section is replaced with Criteria for Selection of Cases and Procedures sections. A Retrospective Study must include a meaningful statement of purpose, clinically relevant data, and clinically useful conclusions or interpretations derived directly from evaluation of the cases described. Except for rare conditions, Retrospective Studies should contain information on at least 10 animals and include appropriate statistical analyses.

A **Descriptive Study** is organized in a manner similar to that of an Original Study. The Introduction section is limited to 1 or 2 short paragraphs. The Material and Methods section is replaced with a Procedures or Techniques section, in which a description of the procedure or technique is provided. The Results section contains the number and description of the animals, outcome, and complications and is followed by the Discussion section. A Descriptive Report does not typically contain statistical analyses.

A **Short communication** is organized similar to that of an Original Study. The total length of the article (excluding title page, summary, references and figure captions) should not exceed 2500 words, with a 150-word Summary and a maximum of two figures/tables and 10 references.

A **Clinical Report** begins with the signalment of the animal or animals, followed by a chronologic description of pertinent aspects of the diagnostic examination, treatment, and outcome, and ends with a brief discussion. When more than one animal is involved, a representative of the group should be described in detail; important differences among animals can be addressed separately. For reports in which there are 3 or fewer animals, summarize pertinent abnormal findings in the text. For 4 or more animals, one table that provides a summary of pertinent abnormal findings may be accommodated, provided that such findings are not repeated in the text.

Footnotes

Cite footnotes by superscript, lowercase letters in the order in which they appear in the text. List footnotes alphabetically just before the references. For products and equipment, provide complete information in the footnote, including manufacturer's name and location (ie, city, state, and country). Abstracts, personal communications, and theses should be cited as footnotes.

References

Authors bear primary responsibility for accuracy of all references. References must be limited to those that are necessary and must be cited in the text by superscript numbers in order of citation. Journal titles in the Reference section should **be abbreviated** in accordance with the National Library of Medicine and *Index Medicus* and must be *Italic*. **For references with more than 3 authors, only the first 3 authors should be listed, followed by "et al."** The following is the style used for common types of references:

Article in journal:

3. Moore MP, Bagley RS, Harrington ML, et al. Intracranial tumors, in *Proceedings*. 14th Annu Meet Vet Med Forum 1996;331-334. *Electronic material*

4. Animal and Plant Health Inspection Service Web site. Bovine spongiform encephalopathy (BSE). Available at: www.aphis.usda.gov/lpa/issues/bse/bse.html. Accessed Feb 18, 2003.

Figures

Limit figures to those that reduce or clarify the text. Text and symbols should be large enough that they will still be legible when the figure is reduced to one column width during publication. To ensure high-quality reproduction, symbols used in graphs should be limited to open and closed circles, triangles, and squares; axes should be labeled in Helvetica or Arial font. Keys to symbols may be placed in a small box inserted into the unused portion of graphs. Photomicrographs and electron micrographs must have an internal scale marker. To express magnification with an internal scale marker, divide the length of the marker by the original magnification. For figures that consist of multiple parts, individual parts of the figure should be identified by capital letters embedded in the figure, rather than by describing the location of the part in the legend (eg, top right). Original radiographs and transparencies will not be accepted for review or publication.

Figure legends must be given at the end of the manuscript. Sufficient information should be included to allow the figure to be understood without reference to the text. When applicable, stains used for histologic sections should be indicated in the legend. Authors wishing to use any previously published figures must submit written permission from the copyright holder.

Tables

Submission of excessive tabular data is discouraged, and tables should be limited to those containing data important to understanding and interpreting results of the study. Authors will be asked to delete tables containing data that could be given more succinctly in the text. Do not use tables that focus on findings in individual animals. Authors wishing to use any previously published tables must submit written permission from the copyright holder.

Review process

The *IJVS* reserves the right to reject any manuscript. All the manuscripts submitted to the journal are subject to review. Manuscripts are reviewed initially by an *IJVS* scientific editor. Those with insufficient priority for publication are rejected promptly. Manuscripts considered

for publication are sent to a minimum of 2 experts for external review. Identity of reviewers and authors are kept confidential.

Authors are expected to respond to reviewer comments and make appropriate revisions within 30 days. Revised manuscripts may be rereviewed. Manuscripts that pass review are accepted for publication provided that authors respond meaningfully to questions and concerns raised by an IJVS scientific editor.

Sequence of publication

The *IJVS* is published Two issues a year. Manuscripts are processed for publication in the order that they pass review. Adherence to these instructions and expedient revision and return of manuscripts will minimize time from submission to publication.
